Saudi Arabia

SUMMARY

A graduate with a Bachelor's Degree in Information Systems from Prince Sattam bin Abdulaziz University. Possess extensive technical expertise, including proficiency in Microsoft Office Suite, data analysis, system analysis, database management and network administration. Complemented by strong soft skills such as effective communication, time management, problem-solving, and teamwork, with a creative approach to tackling challenges.

EDUCATION

Prince Sattam bin Abdulaziz University | Bachelor's Degree in Information Systems

Bachelor's Degree with First-Class Honors | GPA: 4.89/5 | 2021 - 2025

- o Analyzed and designed effective information systems to meet organizational needs.
- o Applied database management principles for secure and efficient data handling.
- o Utilized programming languages to develop and maintain software solutions.
- o Demonstrated ethical and professional practices in managing information systems.

TRAINING COURSES

● Certifications & Courses:

Machine Learning for Data Science Projects – Issued by IBM

Oct 2023

Successfully completed Advanced Data Science and Machine Learning course offered by IBM, focusing on advanced data techniques and models, modern algorithms for machine learning and deep learning, as well as advanced artificial intelligence tools for data analysis and process automation. The course included practical application in the field of data science by playing key roles within a data science team to solve real-life problems facing insurance companies, such as detecting claims fraud.

Getting Started with Threat Intelligence and Hunting – Issued by IBM

Oct 2023

Successfully completed a specialized course in Threat Intelligence and Phishing from IBM, which included advanced concepts, practical methods, and advanced tools in the field of threat intelligence. It included extensive applied activities and practical skills in cyber threat hunting techniques, with an emphasis on adopting best practices and methodologies to analyze and counter security threats.

Getting Started with Enterprise-grade AI – Issued by IBM

Oct 2023

Successfully completed a specialized course in Enterprise Artificial Intelligence offered by IBM, which included advanced concepts and tools in the field of Artificial Intelligence with practical applications. Key topics included: the evolution of artificial intelligence, AI adoption trends in industry, natural language processing (NLP), and virtual agents. This course provides a solid foundation for understanding how AI can be used to enhance business and achieve digital transformation in organizations.

● TECHNICAL SKILLS:

- o Data Analysis.
- o System Analysis.
- o Software Development.
- o Network Administration.
- o Report Preparation.
- o Database Management System.
- o Proficiency in Microsoft Office.

● SOFT SKILLS:

- o Communication.
- o Problem-Solving.
- o Attention to Detail.
- o Time Management.
- o Critical Thinking.
- o Collaboration and Teamwork.
- o Flexibility and Adaptability.
- o Decision-Making.

● Languages: Arabic, English.
